House of Dr. Show

Okay,
so what kind of
problems are
you having?

Show, I wonder if
there's a way to lose a bit of
my belly fat?
I jog every morning and make
sure not to eat anything
at night

But my belly is getting
bigger every day and
that gets me depressed
these days.

**Worries about growing
belly fat**

**Concerns about Frequent
Backache**

Hey, Ms. Tisel,
That's really nothing
I can't even sleep now days
because of the pain in
my back!

**Troubled about catching
a cold frequently**

I have a bad cold and
I have aches over my entire
body. I get sick so often,
what if I die soon
because of this?

Exactly. When the stomach gets cold, our bodies tend to try to keep warm by placing a cover in the area made with fat.

So our bodies place fat there to protect the organs. That's what belly fat is.

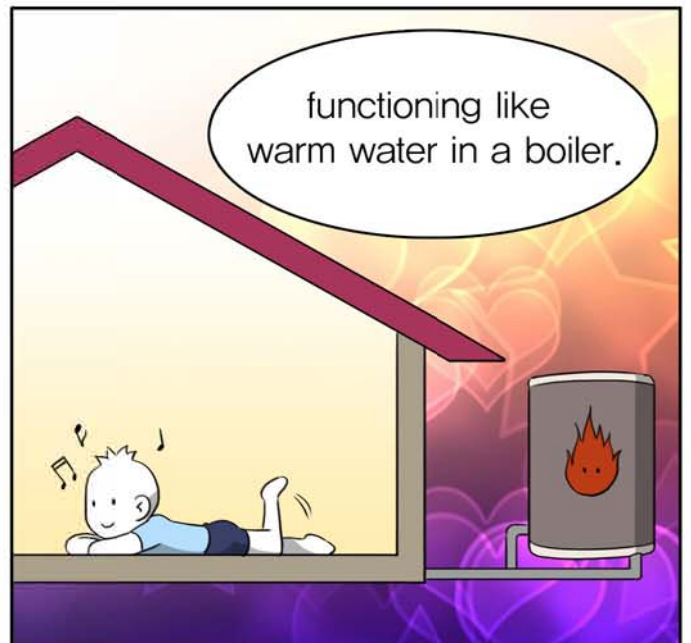

Oh, phew. I see.

So then, why would our bodies get cold? The warm blood circulating along our blood vessels maintains our body temperature

functioning like warm water in a boiler.

So, imagine that there are foreign objects in the boiler pipes, preventing warm water from flowing through. You won't be getting any heat that way.

Just like that, if our blood vessels have been clogged up with waste, warm water will not be flowing along the vessels, resulting in a drop of body temperature.

When the body temperature drops, cells no longer stay active. Reduced activity of cells leads to more accumulation of wastes in the body because they can't be filtered as well, so the body temperature drops even further. It's a vicious cycle.

Especially, if your stomach is cold, the serotonin, which is a neurotransmitter cannot function. This will lower the activity level quite a bit.

Phew, I don't want to move.

My body is not responding because it's so cold.

Even the "Emperor's Internal Document" and "Eastern Side's Guidance" two books that are called the bibles of Korean traditional medicine, stress that you should keep your stomach warm to maintain good circulation and to live long.

Regarding backaches and heat treatment method

Now, let's look into the causes of backaches that Impagu is having.

The spine is the central axis of our body, and is of course very important and sensitive.

Backaches can affect both the upper and the lower bodies, so it's really important to manage it well.

Impagu, you've been working out excessively with weights trying to get buff. I think that's what might have caused it.

Are you saying that working out too much was the problem, not too little?

Yep, many people think that working out a lot is good for your health, and the heavier the better.

But actually, it can worsen your health.

Especially, in case of your back, it may just increase your pain.

To reduce your backache, I think you'd need to minimize stimulation and apply a treatment method that is more gentle and smooth.

Lastly, Enkay

Regarding improved immunity and heat treatment method

Right, you really do get sick often.

It's over for me. My family has always been weak, throughout the generations. I think it's in my genes.

No way! You can totally get better through treatment!

Are you serious?

Lower immunity can lead to frequent sickness or fatigue,

but this can be treated through sufficient generation of heat shock proteins.

The Heat Shock Protein (HSP) is a protein that is generated by itself within the cell through heat.

It functions to restore cells that sustained scars from external impacts and protect our bodies from outside stress.

It also suppresses the creation of fatigue substances so that we can restore our energy quickly, and enhances endorphins, which alleviate pain, to improve body immunity and prevent you from getting sick frequently.

Endorphins??
That sounds familiar
for some reason

You know how you feel
refreshed after jogging or hiking?
It's because endorphins are
produced in your body.

negative bacteria
within the intestines

One way to produce more
Heat Shock Proteins within our body is to
warm the organs around our stomachs
(sometimes called the second brain) and
increase the "positive stomach bacteria"
within our bodies.

positive bacteria
within the intestines

Alright... So to take care of our problems.
All three of us need to keep our stomach
and waist areas warm.

Then how do we
keep these areas
warm?

Why don't we
use hot packs?
I know they are
crazy hot.

Wow,
that sounds
good.

C'mon, you don't
want to keep just the
outside warm.
You want to make the
organs inside your
stomachs warm.

So then,
what do we do?

The solution is...

This right here!

Alright Show,
so what changed
from the previous
version?

The biggest change would be that the type of
gemstones expanded from just one (amethyst) to eight,
including amethyst, jade, tourmaline, topaz, crystal,
tiger-eye, citrine, and elvan.

So how does the
increased number of
gemstones change
the item?

Let's take belly
fat for example.

When I first used only amethysts,
it was too stimulating for
sensitive stomachs.

Unlike my initial expectation that
the strong far infrared ray will
be effective, the stimulation from
strong rays did not eliminate
the belly fat easily.

So I've continued on with my research to
address this point... and thought that it might be
helpful to provide a gentler heating effect
rather than just strong and hot heating effect.

Combination of 8 types of gemstones

After several months of research, I noted that
combining the 8 types of gemstones, which included
“amethyst, jade, tourmaline, topaz, crystal, tiger-eye,
citrine, and elvan” resulted in the gemstones of differing
frequencies emitting very gentle far infrared rays.

Using several types of gemstones led to a mutual interference effect, and smoother absorption into the stomach.

Especially, I discovered that the citrine, tiger-eye, jade, and elvan, which are yellow gemstones, generated very soft far-infrared rays.

And then, I've performed research to lower the temperature to be at 60 degrees so that it will not be too stimulating,

to ultimately produce the current version of gentle the "Pokapoka Heating Belt" which is the infrared ray heating belt for health, beauty, and youth.

If the stomach area is kept warm, the serotonin level within the body increases, leading to more activity within the body and easier disintegration of fat cells.

I've performed clinical experiments on about 80 housewives for a period of 6 months... and discovered amazing things in just 2 weeks.

The participants' belly fat realized that they did not need to stay to keep body temperature, and disappeared on their own quietly.

This is great! So I don't need to worry about belly fat any more?

What about me? Hurry up and make my backache go away as well!

In case of backaches, the Pokapoka Heating Belt should be applied on the backside. Gentle far infrared rays can quickly alleviate the pain.

Apply the Pokapoka Belt at the waist

Enkay, why don't you apply the Pokapoka heating belt on your stomach and lay on the Biomat for 40 minutes to heal yourself?

Got it!

That will result in increased amount of positive bacteria within the intestines, increased level of serotonin within the stomach, as well as heat shock proteins, so your immunity level will go up.

Show, do I have to be on a Biomat?

No, you don't have to. But being on a Biomat for 40 minutes will increase production of heat shock proteins, so your immunity level will go up more rapidly.

Oh, I get it.

Goodbye belly fat!

Backaches too!

그날 저녁

Fermented enzymes increase the AMP (Adenosine Mono Phosphate) enzymes within the body, burning off fat and turning it into energy. Meanwhile, calcium performs ion exchanges to turn fat into energy.

So, Tisel, the reason that you are not losing belly fat easily is the fact that you do not have enough enzymes and calcium.

You should take enzymes and calcium supplements once every morning and apply the Pokapoka far infrared ray belt to drop belly fat more effectively.

And then, use the Pokapoka belt on the Biomat for 40 minutes.

This really does feel strong...

Losing of belly fat means that the metabolism within your body has become more active.

When your stomach is warmer, the level of serotonin within our bodies increase as well, and our bodies become more energized.

Alright then, applying the Pokapoka far infrared ray belt and taking Formula Enzymes and Calcium once a day in the morning will help me drop belly fat while maintaining healthy and energized skin!

Thank you, Love and Hope.

You're welcome. You will be in great shape going forward.

This is all thanks to Show's tireless researches through many nights.

Several months later...

The forest was full of energy. Tisel was no longer worried about belly fat, and continued to show off her tube top fashion

Tisel, I told you to keep your stomach warm!

Impagu as well, through appropriate exercise and using the Pokapoka waist belt, became highly popular with his excellent body.

Enkay experienced a monumental change in his life as well. He no longer gets sick so frequently.

Now he is promoting the "Pokapoka Waist Belt" to others around him so that more people would use it.

C'mon, why don't you also use the Pokapoka Waist Belt to get healthier soon?

They now have
entirely different lives.
The beginning was,
“Pokapoka Waist Belt.”

Thanks, Dr. Show!!
